- ♠♥♦♣ **Electronic Roulette** with 8 seats.
- ♠♥♦♣ **Slot Machines** The ultimate and exiting games for Casinos

TopSlot's proprietary hardware and software equips casinos with everything they need in order to strategically position themselves in the vast gaming market.

BENEFITS

Why choose Electronic Tables?

Electronic Tables allows players to play more hands, spins and other advantages than on traditional tables. This advantage allows casinos to generate more revenue and increase player traffic. The tables provide lower costs since they do not require a dealer and work around the dock. Human error is eliminated from the equation and the result is a flawless profit generating system.

More Player Interaction

Simple to use touch screens provide colorful high-definition graphics on LCD screens thereby eliminating burn-in caused by plasma. The central community screen provides detailed information including player's actions, chip stacks and pot amounts. Having key information on the central screens and not just on individual screens means more player interaction and a more immersive gaming experience.

Complete Product Line

MasterPoker™ tables are available in 10 seat models providing operators more flexibility to maximize floor space. Table games, gaming kiosks, wireless casino tablets and betting stations complete our product offerings.

Customizable

Our MasterPoker™ tables can be customized to meet your needs. Each table is custom-built allowing you to choose the color and material of the table top, armrest, base, or personalise the table with your logo. Choose among multiple cash options including RFID card readers. Our programming is done in-house which allows greater flexibility to adapt the software to your specific requirements. We can modify the tables to incorporate multiple languages, Sit & Go's, cash games and Multi-Table Tournaments.

Tum-Key Solutions

In order to maximize operations, MasterPoker™ provides a comprehensive 3-part management system. View all tables on your floor from one screen with our Floor Manager. Manage player accounts with the cashier interface and get detailed analysis with our Reporting module.

ADVANTAGES

Cost benefits

The system increases the number of dealt hands and prevents mistakes related to rake setting. No dealer is needed. All costs related to purchase of chips or drop boxes, to staff training and security are eliminated. The system does not handle tips. The tips for the dealer stay in the game, and thus the player can play longer. The system is suitable for those who prefer to play online. Master Poker can attract this type of gamers to the casino. It offers detailed information about all events occurring in the room during the game. Thus it allows taking better unbiased decisions for improvement of the functionalities of the room and offers respective business solutions for profit increase.

Game effectiveness

Implemented tests proved that 30 to 70 hands can be dealt in an hour. This means there will be a significant increase in the efficiency of each casino that possesses the system Master Poker. The observation of the game is not restricted, it can use different formats. Jackpot accumulation and control is automatic. The system can produce both standard reports and special reports generated from the Master Poker database. It is possible to pause the tables, to restart or stop them immediately depending on the game requirements. The system provides options for bet restrictions and thus allows better management of demands. With Master Poker the players need not calculate manually their chips, other players' bets and the total on stake. The system ensures precise and permanently available visibility of the chip stack, as well as information about the total amount of blinds. Master Poker eliminates the mistakes that the dealer and the players could make.

Elimination of potential mistakes

The use of the system Master Poker makes possible to eliminate a number of mistakes. As Master Poker is supported by a computer, it is very easy for the new players to enter during the course of the game. In this manner players with little experience are protected against possible mistakes. The players can see all other players at the table, as well as the value of their chips. The system can play back hands in case of a controversy. Because of this option the short-tempered players become more balanced, since they realize that all their actions are recorded. Due to the available tracking options there are quite few fraudulent attempts.

Fair play

The players can determine the outcome of each hand themselves. The shuffling method is certified by an independent research lab as entirely randomized. There is equal probability for each card and each hand to be drawn. In cases of unplanned system shutdown of any type, Master Poker can always restore the game or respectively the hand exactly at the point of its interruption, and this operation can be implemented even on a different table.

Computer configuration with the following parameters:

ATX 400 W

CPU: 2 GHz or better

RAM: 2048 Mb or more

HDD: 2x80 GB 3,5' or more

OS: Windows Server 200x std.

Player computer

Computer configuration with the following parameters:

Power: 24V 65W or more

16 CPU: 1 GHz or better

RAM: 512Mb or more

HDD: 40 GB 2,5' or more

Monitor: 12,1" Touch screen TFT display

Electrical installation

The electrical installation is made with tri-wire cabling, all connections are Schuco type. All connection blocks are current- and voltage-protected on the three wires. All devices are single-phased. The earth must be supplied from a Schuco terminal with minimum 3x2,5 cabling with individual 25A fuse.

Continuous power supply device

A different model may be set up upon a client's request, depending on local power supply parameters (frequent or long power breakdowns, peaks, etc). Where the premises are fully secured with UPS and generator, such a device may not be necessary.

2200 VA / 1850 W Line Interactive UPS

Input: 160-294 V/AC

Output: 220V +6%/-10%

Backup time: 9/18 min@50/70%

Dimensions : 147 x492 x234 56kg

The display must have one of the following inputs: VGA, DVI-I, HDMI, S-Video or COMPONENT

Administration computer

Computer configuration with the following parameters:

ATX 400 W

CPU: 1,5 GHz or better

RAM: 1024 Mb or more

HDD: 80 GB 3,5' or more

DISPLAY: 15" or better TFT display

OS: Windows XP Home edition

Network switch

A standard network switch securing minimum

10/100 Mb communication between separate ports.

16 Port 10/100 Mb Switch not manageable

Card Readers

OmniScan – Impro technologies

Central display

Used to visualize general information for all players:

40" TFT display with resolution 1360x768 or 1920x1200 p/inch.
